WHAT IS PERMEABLE PAVING?

Built for practical, attractive and better-draining surfaces

Permeable paving grids form a cellular reinforcement layer that holds gravel or supports grass, helping create a firm, usable surface while allowing rainwater to pass through the finished paving.

WHERE IT WORKS

DRIVEWAYS & PARKING

Domestic driveways, parking bays and overflow areas

COMMERCIAL LANDSCAPING

Business premises, landscaped parking and public spaces

ACCESS & PATHWAYS

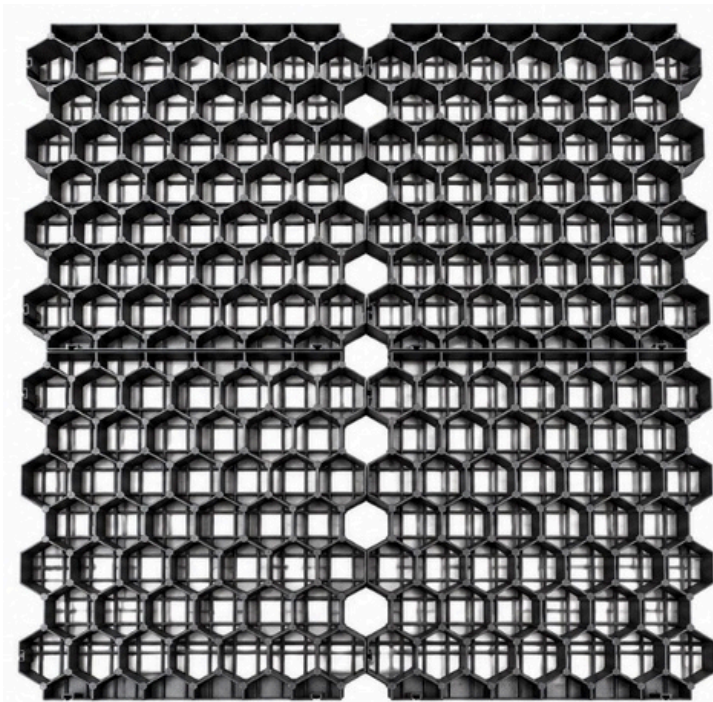

Pedestrian routes, garden paths and suitable access tracks

GREEN SURFACES

Grass reinforcement and gravel stabilisation

KEY BENEFITS

- Helps reduce surface water runoff when installed over a suitable base
- Keeps gravel in place and helps minimise rutting and migration
- Reinforces surfaces for everyday use and easier maintenance
- Modular 500 x 500 mm format for efficient layout and installation
- Suitable for attractive gravel or grass finishes

GRID SIZES

40 MM

500 X 500 mm

50 MM

500 X 500 mm

70 MM

500 X 500 mm

LOADING CAPACITY

Designed for ground reinforcement in trafficable applications, subject to the correct grid depth, infill, sub-base and ground conditions. Vehicle loading performance must be verified against manufacturer test data and project-specific installation requirements.

IMPORTANT: Certified load rating not yet supplied.

Do not specify a tonne rating without verified test documentation.

STOCKED LOCALLY. SUPPLIED NATIONWIDE.

LONDON

UK distribution

SCOTLAND

Northern, UK

NORTHERN IRELAND

UK & Ireland

Grid sizes: 500 x 500 mm | Depths: 40 / 50 / 70 mm

Sub-base and load suitability depend on site conditions and project design.
